- **Scripting Languages :** JavaScript, JQuery

- **Relational Database:** SQL Server 2000/2005/2008, MS Access

- **Reporting Tools :** Exposure to SQL Server, Microsoft Word, Excel VBA

- **Version Control System:** Team Foundation Server& SVN, Git.

- **Web Technologies:** HTML, DHTML, CSS, XML, CSS3, HTML5, Bootstrap

- **Mobile Technologies:** Xamarin, C#, Xaml, SqlLite

EDUCATION QUALIFICATION:

- **Master of computer application from Institute of Technology and Science** affiliated to **AKTU**

EXAMINATION	BOARD /UNIVERSITY	SCHOOL /COLLEGE	YEAR
MCA	AKTU	Institute of Technology and Science	2011-2014
B.Sc.	Magadh University	A.M.College	2008-2011
Intermediate Examination	CBSE Board	K.V.No2 Gaya	2008
High School Examination	CBSE Board	K.V No 1 AFS Srinagar	2006

EXPERIENCE

Virtual Employee	Software Developer	Nov 2015 to Till Date
Bizbrolly Solutions	Software Engineer	Feb 2014 to Nov 2015

Responsibilities:-

Design, Analysis, Application trouble shooting, Technical Support onsite/offsite and development of Projects

Accomplishment:

Completed projects for various clients delivered on schedule.

Projects:

DSB Transport
Client: Tochi Interprise
Team Size: 1
URL:https://www.dsbtransport.com/

DSB Transport consistently provides excellent services for a variety of railroad crews. drivers strive to provide our clients with the most comfortable, reliable and safe transportation possible

Roles and Responsibilities:

- Requirement gathering and design of the application.
- Implemented Business Components and Data Layer Components using Microsoft Patterns in C#
- Implemented Base Classes and Components, Concurrency Management and Exception Management using C#.
- Participated in designing of solutions and identification of technologies to uses.
- Design of various service interfaces along with concurrency and security
- Design the base class to import data from Microsoft Project Plan and migrating system data to Microsoft Project Plan.
- Participation in database design.
- Design WEB API services
- Form Based Authentication, Filters and Validations.

Environment: Visual Studio 2015, bootstrap UI JS, Bootstrap, HTML5,, MVC, WEB API .SQL Server 2014

Gartan Roster
Client: Gartan Technologies
Team Size: 15 URL: http://gartan-greenbay-roster-ne.azurewebsites.net/

Gartan Roster provides a macro view of scheduling, catering for multiple shift patterns and multiple locations. Fully compatible with existing HR, payroll and training systems, it offers a real-time view of staffing today and into the future. It includes self-service features which make it easier for people to manage their time from wherever they have access to the Internet including smart phones and tablets. Gartan Roster puts a true value on people and their time, helping them to engage and make the best strategic decisions. Put simply, it's rostering with respect.

Roles and Responsibilities:

- Requirement gathering and design of the application.
- Implemented Business Components and Data Layer Components using Microsoft Patterns in C#

- Implemented Base Classes and Components, Concurrency Management and Exception Management using C#.
- Participated in designing of solutions and identification of technologies to uses.
- Design of various service interfaces along with concurrency and security
- Design the base class to import data from Microsoft Project Plan and migrating system data to Microsoft Project Plan.
- Participation in database design.
- Design WEB API services
- Form Based Authentication, Filters and Validations.
- Google Maps and Calendar implementation

Environment: Visual Studio 2015, Bootstrap UI, HTML5, Entity Framework, XML**,** VB.Net, Web Form, WEB API 2.SQL Server 2008R2, TFS.

TalaCall
Client: TalaCall
Team Size: 5

TalaCall is a hospital administration tool for health care professionals. TalaCall can manage Physician's On Call Operations. Administrators can schedule physician on call timing and can manage and track their active calls.

Roles and Responsibilities:

- Requirement gathering and design of the application.
- Implemented Business Components and Data Layer Components using Microsoft Patterns in C#
- Implemented Base Classes and Components, Concurrency Management and Exception Management using C#.
- Participated in designing of solutions and identification of technologies to uses.
- Design of various service interfaces along with concurrency and security
- Design the base class to import data from Microsoft Project Plan and migrating system data to Microsoft Project Plan.
- Participation in database design.
- Design WEB API services
- Form Based Authentication, Filters and Validations.

Environment: Visual Studio 2015, bootstrap UI JS, Bootstrap, HTML5, Asp.Net, XML, MVC, WEB API .SQL Server 2008R2

Health Secure
Team Size: 10
Health Secure can help your jail improve safety, reduce liability, contain costs and maintain an efficient, high-morale medical environment.

Roles and Responsibilities:

- Requirement gathering and design of the application.
- Participation in database design.
- Design WEB API services
- Form Based Authentication, Filters and Validations.
- Google Maps and Calendar implementation
- Team member responsible for coding of calculations and prompts for the report and report development according to the end-user specifications.
- Version control of the new and enhancement reports on GIT.
- Prepared design & technical document for the reports.

Environment: Visual Studio 2015, Bootstrap UI, ASP. Net, C#, SQL Server 2012, Entity Framework, LINQ

Run My Route
Team Size: 3
Run My Route is a community based running site. We are striving to provide a simple, easy to use, web site for runners to track running routes. We have added in features for users who sign up such as saving your routes and your own training log to track your workouts. The best thing, it is all free

Roles and Responsibilities:

- Requirement gathering and design of the application.
- Implemented Business Components and Data Layer Components using Microsoft Patterns in C#
- Design of various service interfaces along with concurrency and security
- Design the base class to import data from Microsoft Project Plan and migrating system data to Microsoft Project Plan.
- Participation in database design.
- Form Based Authentication, Filters and Validations.
- Google Maps and Calendar implementation
- Team member responsible for coding of calculations and prompts for the report and report development according to the end-user specifications.
- Version control of the new and enhancement reports on GIT.
- Prepared design & technical document for the reports

Environment: Visual Studio 2015, Bootstrap UI, HTML5, MVC, C#, SQL Server 2012, Entity Framework, LINQ.

CoreLogistic
Team Size: 5

Core Logistic Private Limited is a leading name in the Warehousing and Logistics Services in INDIA, with our prime focus on Telecommunication Industry, Warehouse Management, Inventory Management, Order Fulfilment and Forward Service (Direct to the final destination) is the CORE business function of Core Logistic Pvt. Ltd.

Roles and Responsibilities:

- Requirement gathering and design of the application.
- Implemented Business Components and Data Layer Components using Microsoft Patterns in C#
- Implemented Base Classes and Components, Concurrency Management and Exception Management using C#.
- Participated in designing of solutions and identification of technologies to uses.
- Design of various service interfaces along with concurrency and security
- Design the base class to import data from Microsoft Project Plan and migrating system data to Microsoft Project Plan.
- Participation in database design.
- Design WEB API services

Environment: Visual Studio 2015, bootstrap UI, Bootstrap, HTML5, Asp.Net, Xml, FileZilla, VB.Net, Ado.Net

Skelligs Rock
Team Size: 1

App to find your perfect hike, bike ride, or trail run. Filter by length, rating, and difficulty level. Show yourself on map and find route even there is no network.

Roles and Responsibilities:

- Performed the overall responsibility of modules and ensured smooth delivery.
- Interacted with project development team, designer, client.

Environment: Xamarin, C#, Xaml, SqlLite

DodgyGear
Team Size: 2

The uWatch Dodgy Gear free to download search engine for 'reported stolen goods' Registered members of the uWatch asset list system can log into their web page and report their items as stolen or lost These then instantly appears on the dodgy gear app the items listed on the dodgy gear app will contain Picture and description of item method of contacting owner items can be searched for by keyword, or postcode pictures can be taken of identified goods.

Roles and Responsibilities:

- Performed the overall responsibility of modules and ensured smooth delivery.
- Interacted with project development team, designer, client.

Environment: Xamarin, C#, Xaml
